Vision

1. Introduction

We are living in a time in which people are required to work more and more and tend to neglect their other needs, one of which is finding someone to get involved romantically with. Although there are already ways of doing this (apps like Tinder or OKCupid), they tend to keep their important features only for the premium version of the app, which one must pay for in order to get. The current document will describe the solution for creating a free dating web app, what will be implemented, will clarify all the potentially ambiguous terms and argument why the system is a good replacement for the already existing ones.

1.1 Purpose

The purpose of the Web Tinder App is to replace the already existing dating apps with a newer and free implementation, while still offering their main functionalities. Our aim is to simplify the process of meeting new persons with common interests, whom one can get to know better by texting with, or even organizing dates with. The first step in our vision is to eliminate all the annoying features of the previous apps like adds, to improve the user experience. The second step is to keep a database of all the accounts created, in case a former user wants to reactivate their account. The final step is to implement only relevant features for meeting new persons and sharing ideas with.

1.2 Scope

The following features will be covered by Web Tinder App:

- User Authentication (Create Account + Login)
- Create a profile based on some pictures of yourself and a short text description
- Specify people you are interested in by age, gender and location
- See the profiles of other people matching your interests
- When seeing a person's profile, one can specify whether he/she is interested in that person or not
- See more details about a person you are interested in
- Allow 2 people who were both interested in each other to chat
- Update your profile with new information of pictures of you
- Delete your profile to be able to create one from scratch
- Allow the existence of Admin/Moderator users, which check if a profile is eligible to be displayed to the public

1.3 Definitions, Acronyms, and Abbreviations

Term	Definition
Date	A social meeting planned before it happens, especially one between people who have or might have a romantic relationship.
Interest	The feeling of wanting to get to know more details about a person induced by a physical attraction based on their appearance.

1.5 Overview

The upcoming sections of the document will describe the product positioning in the market, relative to other dating apps. We will then continue by describing the involved stakeholders, the end users, the end user environment and the product hardware and software requirements.

2. Positioning

2.1 Problem Statement

The problem of	Meeting new people of the opposite sex
affects	Persons that are looking for a romantic relationship
the impact of which is	Frustration caused by not having the time to meet new people to get romantically interested with
a successful solution would be	To create an app that allows easily meeting new people

2.2 Product Position Statement

For	single persons
Who	are looking for a partner
The Web Tinder App	is an online dating app
That	Is free and easy to use
Unlike	Existing dating apps that require a subscription to access their most important features (Tinder, OKCupid)
Our product	<ul style="list-style-type: none"> • Provides a handy user interface • Is totally free of charge • Does not show any annoying adds

[A product position statement communicates the intent of the application and the importance of the project to all concerned personnel.]

3. Stakeholder and User Descriptions

3.1 Stakeholder Summary

Web Tinder	Version: 1.0
Vision	Date: 13/03/2019
Project_Vision.docx	

Name	Description	Responsibilities
System Administrator	The person in charge with maintaining the system after implementation	Ensures the system is working without any interruptions Ensures that the system is maintainable Checks periodically the system's security
Competition's employee	A person employed by a company running a similar app	Might try to stop the system from functioning if possible
Implementation Team	The team developing the project. (That is you)	Provide a clean implementation with minimum effort

3.2 User Summary

Name	Description	Responsibilities	Stakeholder
Person	The user that runs the app and uses it	Creates a dating profile Updates his/her profile Deletes his/her profile Checks out other people's profiles Gets interested in other people Chats with the people he is interested in	He is a direct user
Admin	A special kind of user, that checks the eligibility of other users	Can see all the existing user profiles Checks if the content displayed by the user is appropriate Can delete an account if they are displaying inappropriate images or text.	He is a direct user

3.3 User Environment

Person

A person is a regular user that is using the app. He/she can use the app from any computer with a stable internet connection, either from home or from work, for instance, usually in a non-stressful and calm environment.

Admin

The admin is a special type of user, with the permission to delete accounts displaying inappropriate content. He must work from an office, in a non-stressful environment, without any distractions that might inhibit his ability to choose between proper or improper content.

4. Product Requirements

For any user, the product requires first of all a stable internet connection, a computer with at least 8 GB RAM, Dual Core processor, one monitor, mouse, keyboard and an operating system. A browser is also necessary for running the application.

Web Tinder	Version: 1.0
Vision	Date: 13/03/2019
Project_Vision.docx	

For the administrator, it must be guaranteed that his internet connection will not fail at any moment.
